Hello,

Navadvipa Chandra das wrote on Fri, 29 January 2016 22:06In file included from
/home/navadvipa/upp/uppsrc/PostgreSQL/PostgreSQL.cpp:1:0:
/home/navadvipa/upp/uppsrc/PostgreSQL/PostgreSQL.h:10:33: fatal error: postgresql/libpq-fe.h:
No such file or directory
 #include <postgresql/libpq-fe.h>

I installed the packages:
$ sudo urpmi postgresql postgresql-plpgsql postgresql-server postgresql-contrib postgresql-devel
postgresql-docs
This looks like a bug. The file is actually located in /usr/include/libpq-fe.h. Quick file search would
tell you that ;) So the postgresql/ shouldn't be there, the only systems where this works are those
based on Debian, where the path is for some reason different. For a quick fix, just remove the
"postgresql/" from the include.

Best regards,
Honza
