Hi.

I tried compiling the latest stable release on Arch linux which unfortunately failed.
The problem seems to be caused by a recent change in the include guard naming in freetype
where leading underscores (__) have been removed:
sourceforge.net/projects/freetype/files/freetype2/2.6.3/
I changed the file uppsrc/plugin/FT_fontsys/ft2build.h and added the new macro name which did
the trick for me :p but perhaps it should be done in another way.

#ifndef __FT2_BUILD_GENERIC_H__
#define __FT2_BUILD_GENERIC_H__

#ifndef FT2BUILD_H_
#define FT2BUILD_H_

#include <plugin/FT_fontsys/config/ftheader.h>

#endif /* FT2BUILD_H_ */

#endif /* __FT2_BUILD_GENERIC_H__ */
