Hello all!

New version.

New opportunities.

Tidied the function code int GetTabLR( JumpDirect jd );

Added the ability to spin around the cycle in the composite tab with the Ctrl+Alt+B left Ctrl+Alt+N to the right. Now in U++ can only be spin cycle in the composite tab with the mouse and only right. Using the keyboard is impossible, but it's not very good.

EditorTabBar.cpp :

Changed void Ide::TabsLR(...) function.

Add function void Ide::TabsStackLR( TabBar::JumpDirect jd )

ide.cpp

in function ide::Key(...)

Changed the function call TabsLR

and add

case K\_CTRL|K\_ALT\_B:

  TabsStackLR( TabBar::JumpDirect::Left );

  return true;

case K\_CTRL|K\_ALT\_N:

  TabsStackLR( TabBar::JumpDirect::Right );

  return true;

ide.h

Changed the function declaration TabsLR(...)

Add function declaration TabsStackLR(...)

TabBar.h - add this :

```
enum class JumpDirect { Left, Right };
class JumpStack : Moveable< JumpStack > { ...
JumpStack jump_stack;
int GetTabLR( JumpDirect jd );
int GetTabStackLR( JumpDirect jd );
int GetLR( int c, JumpDirect jd );
Changed function virtual void CursorChanged()
```

TabBar.cpp

Added function bodies

```
int GetTabLR( JumpDirect jd );
int GetTabStackLR( JumpDirect jd );
int GetLR( int c, JumpDirect jd );
```

Changed function void TabBar::Clear() { add jump\_stack.Reset();}

With best regards Navadvipa Chandra das.
