And, if you have read:
 http://www.arilect.com/upp/forum/index.php?t=msg&goto=33 24&&srch=duplicate#msg_3324
I even made a compound name (but with preffixes) generator for templates which I wanted to use
like a kind of exporter-duplicator...

Also, other software uses suffixes for directories which I find very useful e.g agg-2.4... should be
that introduced into U++?
To recognize which packages belong to which version? That whould improve principle "Everything
belongs somewhere" to "Everything belongs where it must belong" ...
