forlano wrote on Sat, 12 March 2016 17:44Hello,

I am trying this package because I need to write an Excel file. It seems very good.
When I run the demo an Excel file is opened. I do not want to open the file, but just write it.
How to produce the same output but without to display any file during the calculations?

I used sheet.OpenSheet(test, false) but without success.

Thanks,
Luigi
Solved!

It was necessary to set even AddSheet to false

sheet.AddSheet(false);
