Hello,

Well, you can add any assembly by yourself. First of all open IDE and create new assembly (Right click on assembly list and select "New assembly". Then you need to setup it. First of all specific path to MyApss dir then to uppsrc. For me on Linux the path looks like this:

"/home/klugier/MyApps;/home/klugier/upp/uppsrc". Please notice that ide search for main packages in first directory. The second is supportive, but also important. Beacuse if you don't specific uppsrc - you don't use any of U++ packages.

If you have MyApps, but with different path. Just double click on assembly name and change path to your "real" MyApps directory.

Maybe this screenshot find helpful to you:

Sincerely,
Klugier
