I was able to get the MYAPPS to open in theide but I could not compile because I did not have the uppsrc path specified. I downloaded the # 9622 zip and unzipped. Then I copied the win-9622 to the C root.

In the win format:

C:\upp-win-9622\upp\uppsrc

Should I just copy that upp directory to the C root so I would have C:\upp\src and then be able to browse

and select the uppsrc or do I need to manually add C:\upp\src to the path

I am confused as I have not done this before. All the previous versions of upp that I have used the MYAPPS was setup automatically.

assembly ? package ? nests How theide defines these terms is just ??? to me
