
Subject: Custom/Weird Array Setup

I've been mucking around with this for a bit. Was wondering if an ArrayCtrl could be set up like the application image attached.

I would assume that would be a custom widget, with the blue text being some sort of special row attached to the standard row, but I don't know.

Is it possible to get the blue text that spans multiple columns working easily or is this strictly a custom widget setup?

Thank you,
Brian
