I look at MS ODBC sample app (<https://code.msdn.microsoft.com/ODBC-sample-191624ae>)

This sample app using SQL\_WCHAR datatype constant. This works (and SQL\_CHAR works too)

- MSSQL converts GUID to string properly. (Sample using SQLBindCol approach instead  
SQLGetData)

It is strange that SQLGetData(..., ..., SQL\_CHAR,...) inside Upp returns error.

I think I miss something obviously.
