It surprised me that it didn't work for you. The linked post is actually irrelevant to our situation.

If you can create a minimized sample, I can try and determine what goes wrong.

Before that, try the following

```
#include <CtrlLib/CtrlLib.h>
```

```
using namespace Upp;
```

```
GUI_APP_MAIN
```

```
{  
    TopWindow a;  
    a.Open();  
    a.TopMost().Run();  
}
```

Replace TopWindow with your TopWindow derivative. This is neater way to guarantee the TopWindow(derivative)'s top->hwnd is initialized, ie, call Open() before call TopMost().

If above won't work, then your problem is a little different, e.g., your ctrl might have a parent (which will result in GetHWND() returning NULL).
