
Subject: Global namespace object's properties

Hi!

I noticed one small problem (generally new C++ parser works very good :)):

```
void App::MainSetup()
{
  ::MainSetup dlg;
  dlg.payment.bank_id
    .Add(0, "Nordea")
    .Add(1, "BPH");
}
```

if I press dot after dlg nothing is shown, but if I remove double colon from ::MainSetup everything starts to work. As you can see I use global namespace prefix because of name clash (App::MainSetup and dialog class MainSetup)
