Hi,
Attached the first version of my NTLM implimentation.
see NtlmTest for test cases and usage.

tests, comments or suggestions are welcome.

Note:
 - MD4 : an implimentation from " http://openwall.info/wiki/people/solar/software/public-domain-source-code/md4" is used.
 - HMAC_MD5
 - DES Encryption : in this version, OpenSSL is used . (perhaps removing this dependency in future version)

 - Ntlm authentication can be used by others protocol than HTTP
