Turns out it's even easier. The following code succeeded on my windows 8 system.

```
{  
HDC hdc = CreateDC( "WINSPOOL", "Microsoft XPS Document Writer", NULL, NULL);  
  
if(hdc) {  
    One<PrintDraw> d = new PrintDraw(hdc, "My Printing Job Name");  
    LOG("Printer Draw OK");  
  
    d->DrawText(10,20,"Test",StdFont().Height(720),Black());  
  
    d->EndPage();  
  
    DeleteDC(hdc);  
}  
}
```

You should replace "Microsoft XPS..." with your actual printer name (who doesn't need to be the default printer.

HTH,

Lance
