Hi Alboni,

If you're using debhelper, it can generate the dependencies for you via dh_shlibdeps. You just have to add the shlibs:Depends variable to your debian/control, e.g.:Depends: \${shlibs:Depends}, \${misc:Depends}
And of course make sure that your debian/rules calls dh_shlibdeps.

You can have a look at how it is done for theide here.

Best regards,
Honza
