fudadmin wrote on Thu, 17 August 2006 17:46Don't worry about this. (stupid me! I tried compressed repos...)

In fact, no, it was the same with the uncompressed version.

Finally, I've succeeded but still I can't figure out the exact reason.

I suspect something related to configs...

I caught it when tried to clean UPPOUT and it showed a different non-existent directory (which I possibly had entered before and then edited)

I'm writing it here just in case someone else encounters this problem...
