I see.

Well, looks like we need to move this piece of code from Skylark to Core, right?

Yes. It will be handy little addition.

So this is now in Core:

UrlInfo

```
f("http://username:password@hostname:9090/path?arg=value&aarg[]=item1&aarg[]=item2#anchor");
```

```
f.url =
```

```
http://username:password@hostname:9090/path?arg=value&aarg[]=item1&aarg[]=item2#anchor
```

```
f.scheme = http
```

```
f.host = hostname
```

```
f.port = 9090
```

```
f.user = username
```

```
f.password = password
```

```
f.path = /path
```

```
f.query = arg=value&aarg[]=item1&aarg[]=item2
```

```
f.fragment = anchor
```

```
f.parameters = {arg: value}
```

```
f.array_parameters = {aarg: [item1, item2]}
```
