Yesterday I installed a new MSC15 and finally I set the directories by hand, that was easy but not evident as thanks to Microsoft, in different computers the MSC15 directories are different :(

ok, looks like they have updated some things...

Currently, U++ is trying to search for dirs based on names. I guess they have changed.

Could you give me overview of dirs in Program Files? Like

```
cd /Program Files
dir /AD /S
```

Mirek
