Those are the exact folders I'm trying to detect too. Under Windows Kits, we need the subfolder 10, not 8.1 or 8.0.

The only problem I'm facing is that the "lib" and "include" folder from "windows kits" has several subfolders, with different versions of the SDK. I have both 10.0.10150.0 and 10.0.10240.0. Inside is the ucrt folder. I'm thinking of sorting these subfolders and using the latest one? And I'm searching for a registry setting that could tell me which one to sue, but so far no luck.
I am doing just that, choosing the latest folder at every option.
