Could you please convert all Windows-related include file names to lower case? They are all lower case with mingw on Linux.

It looks like this is the right time to do that.

A patch file created by git looks weird, but still ...

You need to use WIN32 flag with mingw on Linux, and TheIDE won't handle rc-files.

Update: if I use WIN32 flag along with GUI and MT, then I get a problem with rc-files. If I just add a -DflagWIN32 common option, then everything compiles, but TheIDE is still linking against Linux libs ...

I guess I'm missing something.

TIA

Patch applied (I do not think it will solve your issues, but it does not harm either).
