Subject: Network remote control

I want to know what is the best approach to remotely control an app using network.

My first idea was use Skylark to serve a webpage that sends command back to the server, and reacts accordly. But it seems quite hard to mix a GUI app with Skylark. There is no documentation nor example for that.

Mi second idea was to use some kind of RPC, but that seems to overbloated to do something that simple.

I review ZMQ but has no event mechanism... Using polling in 2016? Very crusty, i think.

Any other ideas?
Thanks in advance.
