My code as following. Compiled OK but when I run the program and push button to search file, No response and like crashed.

Someone help to solve this issue ???

```
void testU::PushRun()
{
    grid1.Clear();
    intfile=0;
    Thread().Run(THISBACK1(Searchfile,"C:"));
    Thread().Run(THISBACK1(Searchfile,"E:"));

    while(Thread().GetCount());

    String s = "Total " + AsString(intfile) + " Files";
    PromptOK(s);
}

void testU::Searchfile(String path)
{
    FindFile fs;
    String file = edit;
    file = path + "\\\" + file;
    if(fs.Search(file))
    {

        do
        {
            Time t(fs.GetLastWriteTime());
            String lstime = Format("%",t);
            String fullname = fs.GetPath();
            INTERLOCKED{
                grid1.Add(fullname,lstime);
                intfile++;
            }
        }while(fs.Next());
    }
}
```
