Hello,

It seems interesting to me. Can you post your package with macro. I want to test how macros works. I have never tried it before.

I think you can use something like this: (It is new in place bar lambda callbacks added by Mirek in recently version of upp):

```
bar.Sub("Macro", [=](Bar& subBar) {  
    for(int i = 0; i < files.GetCount(); i++)  
        subBar.Sub(files[i], [=] { EditFile(files[i]) });  
});
```

It would be good at least for me if you post diff here. Make sure you checkout official upp mirror - more information you can find in updated article about svn [http://www.ultimatepp.org/www\\$uppweb\\$svnInstall\\$en-us.html](http://www.ultimatepp.org/www$uppweb$svnInstall$en-us.html). I updated this site how to generates diff. It will be available tomorrow.

Sincerely,
Klugier
