akebee wrote on Tue, 21 June 2016 03:00In my skylark web server app i use mysql server to store data.
the SqlSession didn`t have method such as "IsConnected()" so i can not hold the session and have no choice but to connect to the server every time :blush:

You can use global SQL and SQLR and connect to your database when skylark threads are created (just once when your program starts)
Take a look at skylark tutorial - 9. Connecting SQL database
