Subject: how many threads should i use in SkyLark server?
Posted by akebee on Sun, 26 Jun 2016 09:28:41 GMT

In the source i see

INI_INT(threads, 3 * CPU_Cores() + 1, "Number of threads in each Skylark subprocess");

My skylark server always works well, but today i found it can not connect,
i go into the remote destop found that there are 10 TCP connections ESTABLISHED,
Is the number of threads too small to handle so many connection ?
