Subject: Re: Next CodeEditor misery: selecting highlighted text colors does not work Posted by copporter on Mon, 27 Jun 2016 15:31:24 GMT View Forum Message <> Reply to Message

Issue solved.

The problem was that CodeEditor needs to re-highlight the entire text in order for this change to take effect. Somehow the other option changes were triggering a re-highlight or something similar, but not the selected text. Not 100% sure what the real problem was, but calling Highlight after setting all the styles fixed this.
