Subject: libpng on Linux
Posted by forlano on Wed, 13 Jul 2016 09:23:55 GMT

Hello,

my programs use the plugins/png. This means, I believe, that does not matter if the user has installed his version of the png library on Linux.
However one of my user reported that upgrading his distro my program stopped to work:

>> ./Vega7: error while loading shared libraries: libpng12.so.0: cannot
>> open shared object file: No such file or directory

Can I compile statically such package. Can I do something to prevent the problem?

Thanks,
Luigi
