Subject: Wrong handling of Combined Unicode Characters Posted by frankdeprins on Wed, 13 Jul 2016 12:07:44 GMT

View Forum Message <> Reply to Message

Text created from combined unicode characters is wrongly handled in EditString field (and probably other controls).

See the attached project; run it and try to select one character.

You see that you have to press the arrow keys twice to go one character to the left/right.

When selecting or deleting characters, more 'funny' things happen.
