Hello Koldo,

I think we can remove all Scatter related packages from bazaar and keep only this in uppsrc. Having to the same packages (one newer that compiles and one older that does not) is definitely not good idea. Please notice that in the past we removed Docking from bazaar and keep only version in uppsrc.

What do you think - can we easily removed it from bazaar. If we have any examples in bazaar we can move it to regular upp examples. But we need to be sure that it works fine with latest U++.

Sincerely,
Klugier
