Hard to tell :o.

You be the judge of that!

```
def IsChar(c1: Char, c2: Char, c3: Char): Bool; const {  
  return term[0] == c1 && term[1] == c2 && term[2] == c3;  
}
```

```
bool IsChar3(char c1, char c2, char c3) const { return term[0] == c1 && term[1] == c2 && term[2]  
== c3; }
```

On paper it might not be identical. But logically it is...
