Actually, the language was not missing from the selector -- my error.

However, once msMY was selected, there was a compilation error.

It turns out that Core/t.h file is missing that entry. I fixed my local copy by adding the following line:

#define msMY(text) { LNGC_('M','S','M','Y', CHARSET_UTF8), text },

This resolved the msMY issue for me.

Please verify and add to U++ source.
