Hello Giorgio

In Bazaar/Controls4U there is HyperlinkLabel that does the job.

It is so simple that you can even copy it.

```
class HyperlinkLabel : public Label {
public:
    HyperlinkLabel() {
        NoIgnoreMouse();
        SetLink(LtBlue());
    }
    HyperlinkLabel& SetHyperlink(const char* str) {hyperlink = str; return *this;}

private:
    String hyperlink;
    virtual Image CursorImage(Point p, dword keyflags) {return Image::Hand();}
    virtual void LeftDown(Point p, dword keyflags) {LaunchWebBrowser(hyperlink);}
};
```
