NilaT wrote on Wed, 28 September 2016 09:09Hello,

since I updated to Win10 with MSC15 and the latest Upp, several errors have occurred. Most of them are solved, but one error is very annoying and can't be solved by myself, so please help me.

As soon as I put some breakpoints in my code and step through it, it sometimes randomly (not at all points, but if it occurs one time at a specific point it will always occurs there, so I can reproduce it), crashes with an "Parser error(1, 386): Unterminated string" error.

The numbers vary, but the result is always the same, TheIDE crashes and all my work is lost. Please, any help is highly appreciated!

Thanks!

PS: I searched the forum and found something regarding CParser::ReadString, which leads me to CParser::ReadOneString and if(chkend) {
 ThrowError("Unterminated string");
 return result;
}

But, I put a Breakpoint there and it hasn't stopped there, so I don't think that's the right direction. I can now say that ReadOneString doesn't create the error, as I commented the ThrowError part out, but the result stays the same. The funny thing is, the string "unterminated string" cannot be found at any other point than this... Pls help me, I don't know what I should do, but not be able to debug a program sucks.

```
//edit2: Could it be an error at idewin.cpp?  
catch(const CParser::Error& e) {  
    Exclamation("Parser error " + e);  
    LOG("!!!! Parser error " + e);  
}
```

I remember fixing bug like that... Are you sure you have the latest trunk ide?
