6. Ask a lot of small questions instead of "please write for me a book about upp structure"
I didn't really mean to ask questions, rather make a suggestion (the questions were to show why I made the suggestion).

If I wanted a book, I'd use wxWidgets

Anyway, using the IDE Assist++/help seems a good starting point.

Well, I see "gentle criticism", not suggestion. If you want to suggest, you have to propose different structure
