Subject: Question about Drag and Drop

Hello,

When I choose to use the DND\_EXACTIMAGE flag in a call to DoDragAndDrop, how can I make a visual difference between a DND\_COPY and a DND\_MOVE operation?

Would it not be better to have an overloaded version of this function, accepting two images (or even three, one more for the 'no drop allowed')?

Or do I overlook something?

Regards

Frank De prins
