Hi.

I try to implement GIT support to the IDE. You can find the actual implementation at <https://github.com/CoolmanCZ/mirror>.

Currently is supported:

- \* basic integration with IDE to support manipulation with the files
- \* GIT configuration
- \* GIT branch / remote configuration
- \* fetch, merge, push
- \* commit
- \* stash / stash apply
- \* GIT repository history
- \* GIT file history

I would like to ask you to help me with the testing, also suggestions are welcome. Please, take into account that the current implementation is a prototype. So It can be changed/enhanced by your requests.

For your requirements, please use the issue tracker at the link mentioned above.

Thanks, Radek
