Klugier wrote on Sun, 13 November 2016 19:10Hello,

I think u++ will never move for current approach called Topic++ to solution like doxygen/javadoc. For me current solution is much better, because you don't need to write this fancy comments in your code. I think for people outside U++ it can be treated as not standard, but it is powerfull tool - probably needs several improvements. Don't take me wrong - T++ has got production status.

Yes! But We create Makefile and others for export project. And our topic++ comments & descriptions must be visible by editor outside from U++ environment.

This may become as stimulation for programmers comment out his code!
