v0.3

Added stuff, check note.txt,  
one of it is the possibility for total commander 'transparent' usage of files,  
whether they are packed or unpacked - that is; zipped 'current' contents files can be accessed by  
any tool,  
something like total commander UnpackAllAndExecute - but you get pathAndFile to temp  
folder/file that  
was created transparently - sample included in next post.

Command line params added:

-file param added to simmxttools, use: simmxttools -file somescript.txt or simmxttools -file  
somescript.smx

-args param added to simmxttools, eg(-args thearg1 thearg2), using at end - marks all next args as  
passed 'arg',

access as '\$arg1', '\$arg2' etc, \$nclargs as numCmdLineArgs  
check note.txt for more.

Total commander unpacker - xul viewer sample is available in next post.

Tool is also available here:

<https://ws-tools.000webhostapp.com/>

and here: simmxttools gmx
