v0.3

Added stuff, check note.txt,
one of it is the possibility for total commander 'transparent' usage of files,
whether they are packed or unpacked - that is; zipped 'current' contents files can be accessed by any tool,
something like total commander UnpackAllAndExecute - but you get pathAndFile to temp folder/file that
was created transparently - sample included in next post.

Command line params added:
-file param added to simmxtools, use: simmxtools -file somescript.txt or simmxtools -file somescript.smx
-args param added to simmxtools,eg(-args thearg1 thearg2), using at end - marks all next args as passed 'arg',
 access as '$arg1','$arg2' etc, $nclargs as numCmdLineArgs
check note.txt for more.

Total commander unpacker - xul viewer sample is available in next post.

Tool is also available here:
https://ws-tools.000webhostapp.com/
and here: simmxtools gmx
