Hi Mirek,

mirek wrote on Sun, 25 December 2016 09:45: Mostly for my own reference:

[/code]

Your series of commands is time consuming because each time yum is called. This can be simplified in one command with a yes switch "-y" as follows:

```
yum -y install gtk2-devel pango-devel atk-devel cairo-devel libnotify-devel bzip2-devel  
xorg-x11-server-devel freetype-devel expat-devel
```
