Hi Mirek,

mirek wrote on Sun, 25 December 2016 09:52

Personally, I would prefer removing .spec file altogether.

.rpm based distros are Spanish village for me. IMO, our responsibility for nightly builds / releases should stop at producing tarball with makefile which builds (perhaps after some package installs) on any most targets. Platform specific packages should be out of ultimatepp.org responsibility... There are too many target platforms to maintain directly...

Mirek

May be you did not see different possibility of using cross-platform FPM packages for distribution of source code.

Thus, I - as I disagree with you - have opened a seperate thread here and created a poll:

http://www.ultimatepp.org/forums/index.php?t=msg&goto=47_174&#msg_47174

I am now curious if you give a vote to my idea!
