On Fedora 25 it will work as expected:

```
wget -N http://www.ultimatepp.org/downloads/upp-x11-src-10597M.tar.gz
rpmbuild -tb --define 'version 10597M' --define "date $(LC_TIME=En date '+%a %b %d %Y')"
```

upp-x11-src-10597M.tar.gz

On Centos 7 64bit (fresh install from "CentOS-7-x86\_64-DVD-1611.iso" with all updates), I get the same error as you do.

It's not packaging related but source code related. If you just decompress the tarball and then type "make", you will get the same errors ("error call of overloaded 'Sort(Upp::Vector<int>&)' is ambiguous").

```
wget -N http://www.ultimatepp.org/downloads/upp-x11-src-10597M.tar.gz
tar zxvf upp-x11-src-10597M.tar.gz
cd upp-x11-src-10597M
make
```

I'm not sure but I guess that it's gcc version related, and for that, I have no solution:

\* Centos 7 : gcc (GCC) 4.8.5 20150623 (Red Hat 4.8.5-11)

\* Fedora 25: gcc (GCC) 6.2.1 20160916 (Red Hat 6.2.1-2)
