Hello all

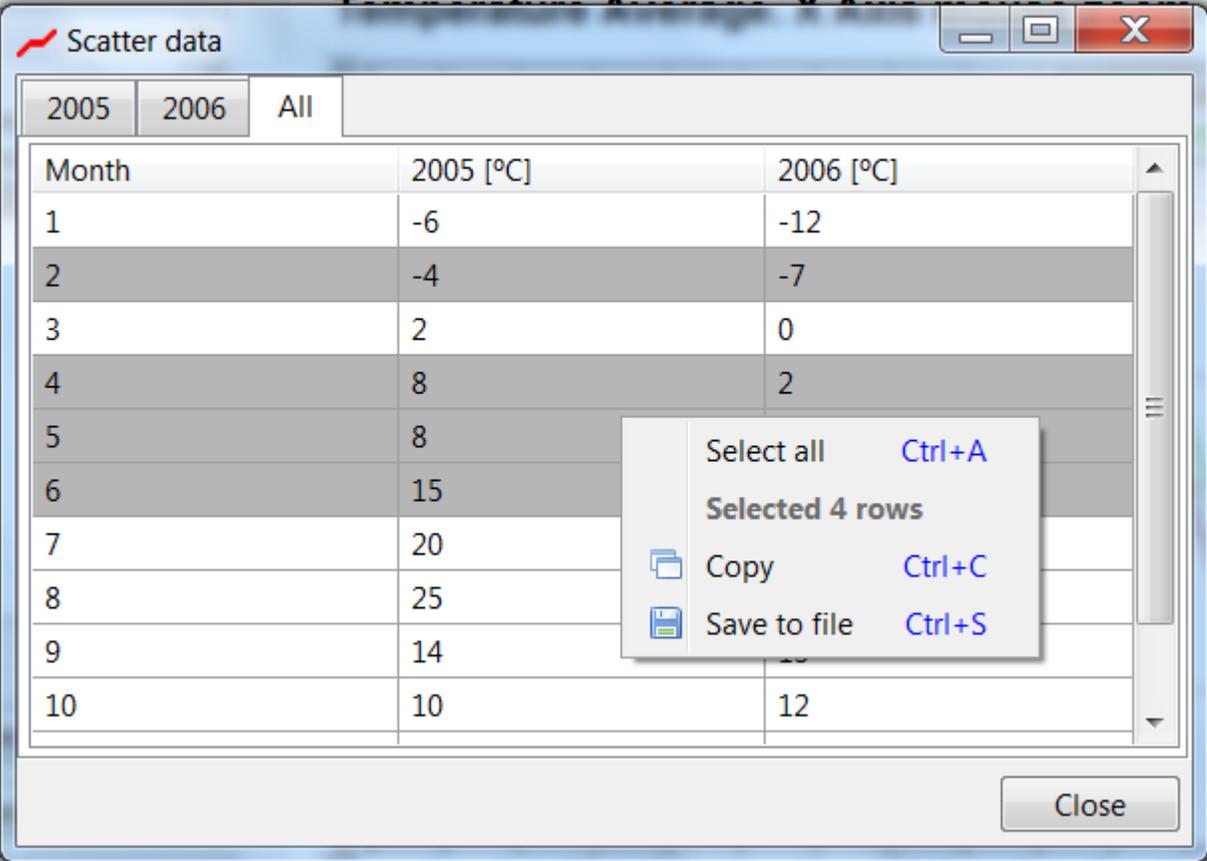

Some new features are included in ScatterCtrl data sheet:

- A new tab "All" has been added for all series that shares the same X axis
- Number of rows selected is included in context menu
- A new "Save to file" option is included, saving the data in a .csv file. Default file separator ";" can be changed using `SetDefaultCSVSeparator()`

example

The screenshot shows a window titled "Scatter data" with a table of data. The table has columns for "2005", "2006", and "All". The "All" column is currently selected. The table contains 10 rows of data, with the first four rows selected. A context menu is open over the selected rows, showing options: "Select all Ctrl+A", "Selected 4 rows", "Copy Ctrl+C", and "Save to file Ctrl+S".

Month	2005 [°C]	2006 [°C]
