Subject: Man page for theide and umk are not in snapshot tarballs

Hi,

I found those files in svn:

- trunk/uppbox/lpbuild2/theide.1
- trunk/uppbox/lpbuild2/umk.1

(and the same files are in 'trunk/uppbox/lpbuild/' too).

I don't know how to modify the 'trunk/uppbox/Scripts/src' script in order to copy those two files and include then in future snapshots.
I would like to add them inside the snapshots so I can use them while building rpm binaries.
