
Subject: CodeEditor: scope highlight [BUG]

Hi,

I found a minor bug in scope highlight. See attached screenshot of a scope highlight where the colored region is shifted with one character.

Additionally I would like to ask for identical scope highlight even if tabs are replaced with spaces. I think tabs are bad because some other editors will display them differently, so I would like to use spaces only. But the scope highlight looks quite strange when you replace tabs with spaces.

best regards,

Sandor
