Hi mirek

Here is how you could use gcc version in a script:

```
gcc_version=$(gcc -dumpversion | sed -e 's/\.[0-9][0-9]\)/\1/g' -e 's/\.[0-9]\)/0\1/g' -e  
's/^[0-9]{3,4}\$/&00/')
```

```
if [ $gcc_version -gt 40900 ]  
then  
    echo "gcc version $(gcc -dumpversion) is greater than 4.9.0"  
else  
    echo "gcc version $(gcc -dumpversion) is lower than 4.9.0"  
fi
```

Why should you still dump upp-devel.spec? At present it works out of the box in last snapshots.
