trunk/uppbox/lpbuild2/umk.1

trunk/uppbox/lpbuild2/theide.1

I want to include them in future snapshots.

I created those man pages for the same reason you need them now - to be placed in packages :) I think it would make sense if they were at the package where they belong. Mirek, what about moving those two files into uppsrc/umk and uppsrc/theide, respectively? It would simplify packaging for all unix platforms.

Best regards,
Honza
