Hello amrein,

Quote:

[TODO] - Add to readme and web documentation: gcc should be ≥ 5.0 (as older versions have problems with C++14 standard).

Our target c++ standard for this release is c++11, not c++14 and GCC versions lesser than 5.0 have got problems with the older one. Currently, only Android Builder supports c++14 by default. When, you will write documentation - please keep this digression in mind.

Sincerely,
Klugier
