## Question:

- When creating POSIX binary packages, where should I copy the dictionaries (like en-gb.scd and en-us.scd) for theide to pick them?
- -> I can't put them in /usr/bin, even if I know that it will work.
- -> theide doesn't find them in /usr/share/upp nor does it in /usr/share/upp/scd and I can't figure it out (where does theide search for those files at first start...).

Could, but didn't help:

https://sourceforge.net/projects/upp/files/SpellerDictionaries/Aspel I/
