Hi Mirek,

Sorry to waste your time with stupid mistakes I make. I sincerely hope this is my final update for Painter.cpp Painter::TextOp() :

```
...
if(fnt.IsUnderline() || fnt.IsStrikeout()) {
    int a = fnt.GetAscent();
    int cy = max(a / 16, 1);
    int cx = x - p.x;
    if(fnt.IsUnderline())
        Rectangle(p.x, p.y + a + cy, cx, cy);
    if(fnt.IsStrikeout())
        Rectangle(p.x, p.y + 2 * a / 3, cx, cy);
}
```

Thanks and best regards,

Tom
