- Even if you don't force c++ (with CXX=c++), domake will search in your path for g++, than clang++ and finally c++.

Currently, I have lang/gcc port installed, as a build/runtime dependency for some port:

% which g++ | xargs pkg which -o

/usr/local/bin/g++ was installed by package lang/gcc

% pkg info -r lang/gcc

gcc-4.9.4:

kBuild-0.1.9998_6

I used CXX variable to set "c++" compiler for build, in this case.
